Synthetic Prompt Corpus (Unlabeled Sentiment)

This document was generated using synthetic data for early-stage experimentation. It contains one-sentence prompts with mixed sentiment. Sentiment is not labeled; downstream pipelines infer it. Prompts are intentionally minimal and consistent to support deterministic downstream transformations. Prompt rows are embedded as images.

Synthetic Prompt Corpus (Unlabeled Sentiment)

row_id	prompt
1	The auditor says access control is stronger and helps prevent escalation.
2	The analyst says the report looks inconsistent and does not match the source.
3	The client says the documentation looks clear and helps onboarding.
4	The operator says the deploy process works smoothly and helps reduce downtime.
5	The client says the documentation looks clear and helps onboarding.
6	The operator says the system starts cleanly and runs without alerts.
7	The stakeholder says the proposal looks solid and helps alignment.
8	The customer says the support experience feels slow and needs improvement.
9	The reviewer says the navigation feels intuitive and helps discovery.
10	The engineer believes the service drops events and breaks downstream reporting.
11	The reviewer says the UI feels cohesive and looks professional.
12	The analyst believes the dashboard improves insight and helps decisions.
13	The user says the new default works well and feels consistent.
14	The team is relieved because the service is stable and drops fewer requests.
15	The customer says the checkout flow works smoothly and feels faster.
16	The analyst says the report looks consistent and matches the source.
17	The operator says the system starts cleanly and runs without alerts.
18	The customer says the support experience feels responsive and helps resolution.
19	The team is relieved because the service is stable and drops fewer requests.
20	The analyst thinks the metric is misleading and does not reflect reality.
21	The engineer thinks the refactor improves reliability and changes little externally.

Synthetic Prompt Corpus (Unlabeled Sentiment)

row_id	prompt
22	The stakeholder says the roadmap looks clear and helps planning.
23	The reviewer says the UI feels cohesive and looks professional.
24	The operator says the alerting setup works reliably and helps triage incidents.
25	The user says the product feels reliable and works well under load.
26	The tester says the build runs consistently and stops failing randomly.
27	The partner says the portal opens quickly and closes sessions correctly.
28	The team is relieved because the service is stable and drops fewer requests.
29	The operator says the system starts cleanly and runs without alerts.
30	The customer is pleased because response time drops after the fix.
31	The customer says the support experience feels responsive and helps resolution.
32	The engineer says the change improves performance and helps reduce latency.
33	The customer says the support experience feels responsive and helps resolution.
34	The operator says the system starts cleanly and runs without alerts.
35	The customer says the release looks stable and feels smoother than before.
36	The team is relieved because the service is stable and drops fewer requests.
37	The stakeholder complains that the plan changes weekly and hurts alignment.
38	The team is relieved because the service is stable and drops fewer requests.
39	The stakeholder says the roadmap looks clear and helps planning.
40	The analyst says the report looks consistent and matches the source.
41	The stakeholder says the roadmap looks clear and helps planning.
42	The customer is pleased because response time drops after the fix.

Synthetic Prompt Corpus (Unlabeled Sentiment)

row_id	prompt
43	The operator says the alerting setup works reliably and helps triage incidents.
44	The user says the new default works well and feels consistent.
45	The user is happy because the new onboarding improves activation rate.
46	The team is confident because the process improves quality and helps delivery.
47	The customer says the release looks stable and feels smoother than before.
48	The stakeholder says the proposal looks solid and helps alignment.
49	The auditor says access control is stronger and helps prevent escalation.
50	The operator says the alerting setup works reliably and helps triage incidents.
51	The customer is disappointed because response time rises every week.
52	The partner says the portal opens quickly and closes sessions correctly.
53	The client says the documentation looks clear and helps onboarding.
54	The operator says the deploy process works smoothly and helps reduce downtime.
55	The reviewer says the navigation feels intuitive and helps discovery.
56	The engineer says the change improves performance and helps reduce latency.
57	The stakeholder says the proposal looks solid and helps alignment.
58	The partner complains that the portal closes sessions too quickly.
59	The engineer says the integration works cleanly and helps delivery.
60	The engineer thinks the refactor improves reliability and changes little externally.
61	The operator says the alerting setup works reliably and helps triage incidents.
62	The user says the product feels reliable and works well under load.
63	The operator says the alerting setup works reliably and helps triage incidents.

Synthetic Prompt Corpus (Unlabeled Sentiment)

row_id	prompt
64	The operator is worried because the system fails health checks overnight.
65	The client is satisfied because the integration works and adds value.
66	The customer says the checkout flow works smoothly and feels faster.
67	The customer says the checkout flow works smoothly and feels faster.
68	The auditor says access control is stronger and helps prevent escalation.
69	The user says the new default works well and feels consistent.
70	The analyst says the report looks consistent and matches the source.
71	The analyst says the report looks consistent and matches the source.
72	The engineer thinks the refactor improves reliability and changes little externally.
73	The tester says the feature works as expected and improves usability.
74	The client is satisfied because the integration works and adds value.
75	The stakeholder says the proposal looks solid and helps alignment.
76	The customer says the checkout flow works smoothly and feels faster.
77	The client says the documentation looks clear and helps onboarding.
78	The client says the documentation looks clear and helps onboarding.
79	The stakeholder believes the plan is solid and helps coordination.
80	The engineer says the change improves performance and helps reduce latency.
81	The user says the product feels reliable and works well under load.
82	The customer is pleased because response time drops after the fix.
83	The engineer says the integration works cleanly and helps delivery.
84	The user says the product feels reliable and works well under load.

94	The team is confident because the process improves quality and helps delivery.
95	The stakeholder complains that the plan changes weekly and hurts alignment.
96	The client is satisfied because the integration works and adds value.
97	The engineer says the change improves performance and helps reduce latency.
98	The partner says the portal opens quickly and closes sessions correctly.
99	The auditor says the control is stronger and helps reduce risk.
100	The engineer thinks the refactor improves reliability and changes little externally.
101	The engineer says the change improves performance and helps reduce latency.
102	The operator says the system starts cleanly and runs without alerts.
103	The auditor says the control is stronger and helps reduce risk.
104	The stakeholder believes the plan is solid and helps coordination.
105	The reviewer says the UI feels cohesive and looks professional.

Synthetic Prompt Corpus (Unlabeled Sentiment)

row_id	prompt
106	The engineer believes the service drops events and breaks downstream reporting.
107	The tester says the build runs consistently and stops failing randomly.
108	The operator says the deploy process works smoothly and helps reduce downtime.
109	The auditor says access control is stronger and helps prevent escalation.
110	The analyst believes the dashboard improves insight and helps decisions.
111	The client is satisfied because the integration works and adds value.
112	The reviewer says the UI feels cohesive and looks professional.
113	The analyst says the report looks consistent and matches the source.
114	The tester says the build runs consistently and stops failing randomly.
115	The operator says the deployment process fails intermittently and stops pipelines.
116	The stakeholder says the roadmap looks clear and helps planning.
117	The user is happy because the new onboarding improves activation rate.
118	The reviewer says the UI feels cohesive and looks professional.
119	The client says the documentation looks clear and helps onboarding.
120	The customer says the checkout flow works smoothly and feels faster.
121	The tester says the feature works as expected and improves usability.
122	The client is satisfied because the integration works and adds value.
123	The reviewer says the navigation feels intuitive and helps discovery.
124	The customer is pleased because response time drops after the fix.
125	The tester says the build runs consistently and stops failing randomly.
126	The reviewer says the UI feels cohesive and looks professional.
